

SR 169 Agua Fria River Bridge Project

CONSTRUCTION NOTICE

The Arizona Department of Transportation (ADOT) has begun improvement work on State Route (SR) 169 at the Agua Fria River Bridge, approximately ½ mile east of SR 69 in the Town of Dewey-Humboldt. The project is under way, and is scheduled for completion by fall 2009.

Currently, the project team is working to replace the old bridge, which involves shifting traffic to one side of the old bridge, demolishing the bridge deck which has no traffic flow across it, and constructing a new bridge deck. When ready, traffic will shift to the new bridge deck and the process will be repeated, eventually replacing the entire span.

Let Us Keep You Informed

Visit ADOT's website at www.azdot.gov/PrescottProjects to learn more about this and other ADOT projects in the region. You may also contact our telephone hotline at

1-888-236-4374.

Due to the physical constraints of the project corridor and size of equipment needed to perform the work, ADOT has implemented two safety restrictions:

- Due to lane shifts and large equipment in the work zone, visibility at the River Road and SR 169 intersection is limited. Residents who access SR 169 from River Road are encouraged to use an alternate access point for entering SR 169.
- Lanes across the Agua Fria River Bridge have been narrowed to 10.5 feet, with a 1 foot shoulder. This traffic control configuration restricts load widths to 10 feet.
